2 Drawer vs. FridgePack

The first decision that needs to be made after deciding to purchase a set of Offroad Systems drawers is whether to go for our Standard 2 Drawer system, or our FridgePack system. Both systems are great, and one system is not any better than the other. The difference will come down to the user. A system that you may love, your mate might find difficult to use, as their set-up might vary to yours. This is why we designed our systems to be so flexible. If you want deep drawers for storing bulky items, we can do it. If you want long drawers, we can do it. If you want ten drawers, we can do that too (currently the record stands at 8 drawers in a Prado).

Our standard 2-drawer system was the first system that we made. The concept is simple. Two drawers, side by side. But there is a little more to it than that. We designed the drawers so that the drawer top sits neatly on the wheel arches on either side. This is for strength, and also to minimise wasted space. Another advantage of building the system like this is that it gives you a flat surface to pack on top of, rather than having to deal with pesky wheel arches. Gear can still be stored in front of the wheel arches underneath the side wings. Having these wings allows you to use the space for storage, and also pack neatly on top of it. If you want to incorporate a fridge with this system, the fridge slide can be easily mounted on top of the system. This can be easily removed when not in use. The system can be used with a standard cargo barrier, as it does not touch the rear seat. This space allows room for not only the barrier, but also an ORS Stainless Steel Water Tank or Security Box. We also offer the two drawer systems in long (950mm long) or deep (280 deep) variants.
The other option is one of our Fridgepack systems. One major advantage of the FridgePack system is the fact that you can customise it to anything you want. The system has been designed in such a way that we can bolt any drawer together to make the best system for you. Some people need deep drawers because they want to put large bulky items in them. Others carry smaller items and use our standard drawers. The system can also be adapted to suit large fridges such as the Waeco 110L etc. We also sell a range of fridge slides to suit these larger fridges. Another big advantage of the FridgePack system is that it keeps the fridge down low, rather than sitting it up on top of the drawers. This makes it much easier to see into, and reach into the fridge. The fridge will also use less battery power as it is kept out of direct sunlight, insulated by the drawers, the top and the side panel.

As mentioned before, there are many possible variations on the FridgePack model. Some of the more popular ones are…

The system pictured uses a single deep drawer, but a standard drawer can be used in its place.
Fridgepack 2 special (1x 280d, 1x 200d)
This system is perfectly suited to the wide, shorter fridges on the market such as a Waeco 80L or Engel 60L as it stands slightly shorter than an Fp3 but still allows the fridge to slide, and has a flat top.

Fridgepack w/Traveller Table
One of our newest products is the ORS Table. This system incorporates the table into the drawers. It slides out, the adjustable legs fold down and the table stands freely. When your finished, the table slides firmly back into place.
